## 1. GENERAL DESCRIPTION AND FEATURES

MTF-TQ35SP741-AV is a TM (Transmissive) type color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) that uses amorphous silicon TFT devices. This model is composed of a TFT-LCD Panel, driver IC, FPC , Touch panel and a back-light unit. The resolution of a 3.5" contains 320RGBx240 dots and can display up to 16.7M colors. The following table described the features of MTF-TQ35SP741-AV.

### 1.1 Features

- Support 24-bit data (RGB).

### 1.2 General Specifications

Item	Specification	Unit	Note
Screen Size	3.5" diagonal	inch	-
Display Resolution	320 x RGB x 240	Dot	-
Dot Pitch	0.073 (W) x 0.219 (H)	mm	-
Active Area	70.08 (W) x 52.56 (H)	mm	-
Outline Dimension	77.8 (W) x 64.5 (H) x 4.12 (T), Not including FPCB	mm	-
Display Mode	Normally white/Transmissive	-	-
Pixel Arrangement	RGB-Strip	-	-
Surface Treatment	Anti-glare (AG)	-	-
weight	128	g	-
Viewing Direction	6 o'clock	-	-
Input Interface	Digital 24-bits parallel RGB	-	-

Note 1: SPI Interface is only to set up the initial code in LCM driver IC register.

Note 2: There had been default initial code stored in LCD driver IC at Sync Mode operation, and if customer needs to revise the default initial code to change gamma or Vcom voltage, then SPI interface is needed.

Note 3: Different from Sync mode, there is no default initial code in driver IC in DE mode, so initial code has to be setup via SPI interface at DE mode.

Note 1: Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR)= L63/L0

L63: Luminance of gray level 63

L0: Luminance of gray level 0

CR=CR (10)

CR(X) is corresponding to the Contrast Ratio of the point X at Figure in Note (5)

## 5. ABSOLUTE MAXIMUM RATINGS

### 5.1 Absolute Ratings of Environment

If the operating condition exceeds the following absolute maximum ratings, the TFT LCD module may be damaged permanently.

(Ta=25(2°C, VSS=GND=0)

Item	Symbol	Min.	Max.	Unit	Note
Storage temperature	TSTG	-30	80	°C	(1)
Operating temperature (Ambient temperature)	TOPR	-20	70	°C	(1), (2)

Note (1) 95 % RH Max. ( 40 °C ≥ Ta )

Maximum wet-bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

- (2) In case of below 0°, the response time of liquid crystal (LC) becomes slower and the color of panel becomes darker than normal one. Level of retardation depends on temperature, because of LC's character

### 5.2 Maximum Ratings (Voltage Referenced to VSS)

## 10. QUALITY STANDARD FOR LCD

### 10.1 Objective

This specification book is the standard for LCD module general inspection. And also this book will be refer to customer approval specification.

### 10.2 Scope

This specification book is applicable to general LCD module. If supplier has any doubt or requirement, then it can be discussed.

#### 10.2.1 Acceptable Quality Level

INSPECTION	SAMPLING PROCEDURES	A.Q.L
Major	MIL-STD-105E Inspection Level II Normal Inspection Single sample inspection	1
Minor	MIL-STD-105E Inspection Level II Normal Inspection Single sample inspection	1.5

#### Major defect :

A major defect is a defect that could result in failure or extremely reduction on the usability of the product for its intended purpose.

#### Minor defect :

A minor defect is one that does not materially reduce the usability of the product for its intended purpose or is a departure from established standards giving no significant bearing on the effective use or operation of the unit.

#### 10.2.2 Inspection Conditions

##### 10.2.2.1 The environmental conditions for inspection shall be as follows

- Room Temperature :  $25 \pm 10^{\circ}\text{C}$
- Humidity Temperature :  $45 \pm 20\%\text{RH}$

##### 10.2.3 The external visual inspection

- The inspection shall be performed by using 40Watts fluorescent lamp for illumination and the distance between LCD and eyes of the inspector shall be 30cm or more.

## 11. RELIABILITY CONDITION

### 11.1 LCM Reliability Test

#### 11.1.1 Reliability Test Condition

No.	TFT	Item	Condition	Test time	Note
1	V	High temp. operating	70°C	240 Hrs	-
2	V	Low temp. operating	-20°C	240 Hrs	-
3	V	High temp. storage	80°C	240 Hrs	-
4	V	Low temp. storage	-30°C	240 Hrs	-
5	V	High Temp / High Humidity Storage	T = 60°C /90%. For (But no condensation dew)	240 Hrs	-
6	V	High Temp/ High Humidity Operating	T = 40°C /90% For (But no condensation dew)	240 Hrs	-
7	V	Thermal Shock	-30°C→+25°C→+80°C,50 cycle 30min 5min 30min	-	-

#### 11.1.2 Operating Test Pattern

No.	Items	Test Pattern
1	Test Pattern in Driving Condition	1. Full Red 2. Full Green 3. Full Blue 4. Gradation (horizontal) 5. Gradation (vertical) 6. Character (111111) 7. Full White 8. Full Black 9. Black Line (horizontal) 10. Black Line (vertical) 11. Mosaic (1X1) The Test Pattern is changed 1sec. The same Pattern are repeated.
2	Black Square	Black Window and White Background

#### 11.1.3 Test Method

The method of visual inspection is equal to the appearance standard. Evaluation and assessment made two hours after return to room temperature ( $25 \pm 5^{\circ}\text{C}$ ). The LCDs subjected to the test must not have dew condensation.

The test pattern is gray scale and the operating voltage sweep from  $V_{th}$  to  $V_{sat}$  variable.

The non-uniformity and other appearance are checked in LCD.

#### 11.1.4 Result Evaluation Criteria

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

#### 11.1.5 Life time

Life time expectancy of LCD Panel is approximately 50,000 hours under the room environment. Definition on the termination of life time is deterioration of contrast ratio by one fifth against initial value.

#### 11.1.6 Basic rule for Reliability test

- \* Place all the samples under room temperature & humidity for 24 hours after reliability stressing.
- \* Room environment means  $25 \pm 10^{\circ}\text{C}$ ,  $45 \pm 20\%\text{RH}$
- \* There should be no condensation during the test.
- \* One LCD module shall be used for one test item only and once.

#### 11.1.7 Judgment Criteria for reliability test No. 1-2

- \* Contrast (or Brightness) ratio variation is within 50% of the initial value.
- \* No abnormal function
- \* No extreme decay on appearance

#### 11.1.8 Life time

Display (LCD module) : Life time expectancy of LCD Panel is approximately 50,000 hours under the room environment.

## 12. PRECAUTIONS

### 12.1 Operation

Burn-in sometimes happens when the same character was displayed at along time. Therefore, to prevent Burn-in, it is recommended to set up a Screen-saver function.

### 12.2 Safety

The liquid crystal in the LCD is poisonous, DO NOT put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

### 12.3 Handling

	<p>a. The LCD module shall be installed flat, without twisting or bending.</p> <p>b. COF or FPC has narrow pattern width, so easily become open circuit by external force. DO NOT apply pressure to COF or FPC especially in bending area.</p>
	<p>c. To avoid damage in appearance or malfunction, DO NOT subject the module to mechanical shock or to excessive force on its surface.</p>
	<p>d. The polarizer attached to the display is very easy to damage, handle it with care to avoid scratching.</p>
	<p>e. To avoid contamination on the display surface, DO NOT touch the display surface with bare hands.</p> <p>f. Provide a space so that the LCD module does not come into contact with other components.</p>

	g. To protect the LCD panel from external pressure, put covering glass (acrylic board or similar board) to keep appropriate space between them.
	h. Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
	i. Property of semiconductor devices may be affected when they are exposed to light possibly resulting in malfunctioning of the ICs. To prevent such malfunctioning of the ICs, your design and mounting layout done are so that the IC is not exposed to light in actual use.
	j. Strong light exposure causes degradation of color filter. It may not recover
	k. DO NOT contact with water to avoid Metal corrosion. l. When it is not in use, the screen must be turned off or the pattern must be frequently changed by a screen saver. If it displays the same pattern for a long period of time, brightness down/image sticking may develop due to the LCD structure.
	m. Never disassemble LCD product under any circumstances. If unqualified operators or users assemble the product after disassembling it, it may not function or its operation may be seriously affected.

#### 12.4 Static electricity

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge.

	<ol style="list-style-type: none"> <li>The LCD module shall be installed flat, without twisting or bending. Ground soldering iron tips, tools and testers when they operate.</li> <li>Ground your body when handling the products.</li> <li>DO NOT apply voltage to the input terminal without applying power supply.</li> <li>DO NOT apply voltage that exceeds the absolute maximum rating.</li> <li>Store the products in an anti-electrostatic container.</li> <li>Peel off protect tape, attached to polarizer, slowly to minimize ESD damage.</li> </ol>
---	--

#### 12.5 Storage

	<p>Store the products in a dark place at +5 ~ +25 degree C, low humidity (50%RH or less). DO NOT store the products in an atmosphere containing organic solvents or corrosive gases.</p>
---	--

#### 12.6 Cleaning

	<ol style="list-style-type: none"> <li>DO NOT wipe the polarizer with dry cloth, as it might cause scratch.</li> <li>Wipe the polarizer with a soft cloth soaked with petroleum IPA, other chemical might damage.</li> </ol>
---	--

#### 12.7 Waste

	<p>When dispose of LCD module, manage it at the production waste according to the relevant laws and regulations.</p>

### 13. WARRANTY

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- 1 We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- 2 We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- 3 We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
- 4 We cannot accept responsibility for industrial property, which may arise through the use of your product, with exception to those issues relating directly to the structure or method of manufacturing of our product. Microtips-origin longer than one year from Microtips production.
